VARIOMAX® patio heater

The energy-efficient premium solution to heat terraces
VARIOMAX® patio heater

The perfect combination: burner of the latest generation, reflector with innovative geometry and high-quality materials.

- **Flexible:** propane and natural gas technology
- **Safe and weatherproof:** electrical ignition – and flame detection technology
- **Easy to install:** integrated suspension for wall mounting
- **High efficient:** High-Grid-Technology for maximum radiation efficiency

**Your Advantages**

As long-standing expert in energy-efficient and innovative heating systems we developed a heating system especially for the usage in outside areas. Due to the physical characteristics the infrared technology meets all the requirements for heating of outdoor areas.

- short heating-up time
- appealing design
- preinstalled flexible gas connection ½”
- robust and weatherproof design
- integrated console for easier mounting
Pleasant warmth thanks to most efficient infrared technology

Using the gas-infrared-technology VARIOMAX® emits the energy in form of infrared radiation. This energy is transferred into heat when it hits a person or object. So the air is not heated but directly the area to be heated. Due to these physical properties the VARIOMAX® is perfectly suitable for heating outside areas. The effect is comparable with the pleasant warmth of sun rays.

Up to 12-times higher energy efficiency.
Less energy consumption than conventional patio heaters or mushroom heaters.
Perfectly combined

The unique combination of technology and design does not only convince our customer: VARIOMAX® was the winner of Plus X Award as Best Product. But not only design counts – the corrosion resistant aluminum housing makes VARIOMAX® also wind- and weather-resistant. The patio heater can be mounted with its prein- stalled console at the wall of a building. That means that you don’t lose any usable space in the lounge area.

VARIOMAX® is available for operation with propane (LPG) and natural gas. If you connect it to a gas line you do not have any cost for transport and storage of the propane bottles.

Comfort and Efficiency

The GoGaS patio heater is available in two performances, 6 kW or 12 kW. For even more comfort and efficiency you can have the patio heater optionally in two stage version. That means you can operate the heater with half or full power.

VARIOMAX® has to be mounted at a height of at least 2.50 m so that the heat radiation has the optimal effectiveness.

Minimum distances to flammable materials and minimum distances to the wall and ceiling

With appropriate measures the distances above the heater can be clearly reduced.
