

Press Release

Educational operation with infection control from a single source

Classroom teaching with reliable infection control

School management, staff, teachers, students and pupils will soon be able to breathe a sigh of relief: Classroom instruction and a great deal of longed-for normality are within reach. GoGaS offers innovative technology for the disinfection of school rooms so that education can soon resume as usual. Whether classrooms, auditoriums, corridors or changing rooms: thanks to the versatility of the INTERx series, all buildings can be made infection-proof with a system solution from a single source.

The environmentally friendly and sustainable solution

The devices of the INTERx series operate with highly efficient UV C radiation - including certified and validated reliability. The ozone-free room air disinfection can be operated without chemicals, without time-consuming filter changes and gently with regard to personnel expenditure. The devices remain inconspicuously in the background and thus do

not interfere with ongoing operations. Thanks to the high sense of security, the return to normality is also intuitively felt by staff, teachers and students.

Take advantage of government subsidies for permanently installed INTERx units

In order to take into account the varying utilization of rooms at different times, the INTERx series offers devices both for fully automatically operated fixed installations and for mobile use. While the former are ideal for stationary infection control in classrooms and sanitary areas, the mobile helpers can be used individually in different rooms. Many fixed installations are even eligible for government subsidies - so take advantage of this opportunity now to make your educational institution fit and infection-proof for the future at low cost.

Comprehensive infection protection with foresight

With the system solution from GoGaS, you can once again focus fully on educational operations, because thanks to the reliability of the INTERx series, school closures due to infection cases are a thing of the past. Equip your buildings from A as in assembly hall to Z as in drawing room with the innovative room disinfection devices and benefit from state subsidies for fixed installations and a high level of health protection for all involved.

This is GoGaS

Established in 1946, GoGaS has become a key innovation and technology partner to many customers and Who is Who in their industries, providing sustainable, environment friendly and innovative turnkey solutions for buildings, manufacturing process up to CO2 neutral operation. The unique portfolio includes a wide range of modular system and turnkey solutions such as IR, UV, UV-C, Air-condition, Heating, Cooling, Ventilation, Solar Systems and others for stationary, mobile and portable in- and outdoor applications. The company is active in several standardization committees, defining the next generation of technology standards such as TGA+.

GoGaS is a stakeholder in leading trade associations and initiatives, e.g. the German Engineering Association e.V. (VDMA), figawa, Export Initiative Energy, ELVHIS. (VDMA), figawa, Export Initiative Energy, ELVHIS. As an active partner of the Sustainability Initiative "Blue Competence", GoGaS is also driving the future of environment friendly and energy efficient planning, building and operating of B2B buildings, thus optimizing its CO2 footprint and maintaining the highest possible asset valuation, ROI and TCO for investors, owners, operators and tenants at the same time. The company is also involved in key research programs of the EU and industrial technology partners. GoGaS provides its customers with turnkey solutions, reducing the number of interfaces, eliminating delays in the Supply Chain and project execution and provides a lifetime warranty and support service.
