

## **>> HEALTH AND SAFETY COMPLIANCE GOGAS ANNOUNCES NEW DIVISION**

Corona and the pandemic has changed our society faster and more dramatically than the introduction of the world wide web in its early days. With the challenge of Corona, only enterprises acting and adapting, both rapidly as well as in a sustainable way will be able to evolve their business model during this crisis and belong to the winners afterwards. For more than 70 years, we at GoGaS are driving changes, innovations and sustainability, making our customers more competitive leveraging from our expertise and competence in IR and UV wavelength solutions. Expanding our solutions and service offerings into the UV-C wavelength spectrum, is a consequent and natural evolution of our sustainable business model and combines our powerful offerings in our new Health & Safety Compliance Division, bringing again, more and sustainable values to our customers across different industries. Sustainable and environment friendly H&S Strategies will soon become a strategic pillar in basically every business model, such as Technology, Finance and IT are already today. Sustainable, transparent and trustable strategies will become a key contributor in the overall value chain and competitiveness, for employees, suppliers and customers, hence, across the entire value and supply chain.

The flagship of our new division is our UV-C disinfection robot, a well proven and certified technology, already used in hospitals and other critical applications. It uses the latest UV-C technology precisely tuned to the 254nm wavelength not only to disinfect in the most environment friendly way, no chemicals, no aerosols, no poisoning of air and water, it also destroys the DNA of Bacteria, Germs, Mold and Viruses and goes far beyond traditional disinfection methods. Once in operation, it disinfects air and surfaces at the same time, up to min. 220cm room height and fits perfectly into any compliance strategy, including digital validation and reporting. Faster, and deeper than any manual approach.

Supporting the rapidly increasing market needs, GoGaS has signed an agreement with the leading robot manufacturer in this industry, Blue Ocean Robotics, Denmark, bringing the CAREtaker to market outside direct hospital applications. The CAREtaker is fully medical tested and certified, easy to use and a safe universal weapon, fighting Corona and other such type of challenges.

Furthermore, GoGaS provides a wide range of standard and semicustom UV-C solutions, both as stand alone versions as well as integrated into OEM applications.

Completing the sustainable offerings in this division, GoGaS has also signed an agreement with one of the world's largest manufacturer for infection prevention solutions and personal protection equipment and will be serving the needs in the non medical market segments. All products come with full trusted medical certifications and at competitive market pricing. More, including product information, application notes, reports and studies, can be found at [www.gogas.com](http://www.gogas.com)
